

Contents of variables used in program getclockrate.f

variable	contents	type
st	ALSEP station number	2 characters
day	day of the year	3 characters
amin	minimum clock rate, 44 frames	6 characters
amax	maximum clock rate, 44 frames	7 characters
in	input data	1600 integers
int	input time	2x45 integers
ind	input data parts	24x45 integers
crb	cumulative counts	8 integers
id	day of the year	single integer
i	temporary pointer	single integer
minc	minimum clock rate, 44 frames	single integer
maxc	maximum clock rate, 44 frames	single integer
nr	record number	single integer
ifc	first frame count of current record	single integer
lfc	last frame count of current record	single integer
it	first time of current record	single integer
lt	last time of current record	single integer
mt	time increment for 44 frames	single integer
ns	sample count	single integer
nc	weighted sample count	single integer
flm	mean frame length	single real number
